

Minnesota Seeding Contractors

State of Purpose

The Minnesota Seeding Contractors Association was established to provide a public forum for open discussion by contractors, material suppliers and professionals involved in the seeding industry.

The organization will meet several times a year to exchange information regarding issues that directly affect association members, including but not limited to wage rates and labor relations, contract specifications, industry standards, environmental issues, innovative products and installation procedures.

It is the goal of the organization to continually improve the quality of work performed by all individuals and companies involved in the seeding industry by supporting and advocating for the development of uniform and consistent product and installation standards.
